

TREATMENT PROGRAM FOR MASTITIC COW

1. Give 20mls Finadyne into the muscle
2. Give 40mls of LA -tetracycline into the muscle (don't give more than 10mls in one spot as it probably will cause an abscess if this is done). Repeat this in 3 days time. Note the 40 day meat withholding period.
3. Strip the cow 3 times a day for 3 days. Following each stripping, inject one syringe of orbenin into affected quarters. Use a single syringe per quarter as this will minimise spread of the organisms.

Try to provide a clean area for the cow as the organisms most likely involved in this case are found in the environment and she is particularly susceptible to them at the moment.

Thank you

Claire Hynes
